

The Synthetic Hot Tub

Synthetic Tub with a real wooden external finish

Synthetic wood-fired Hot Tubs boast various different advantages when compared to the wooden variants:

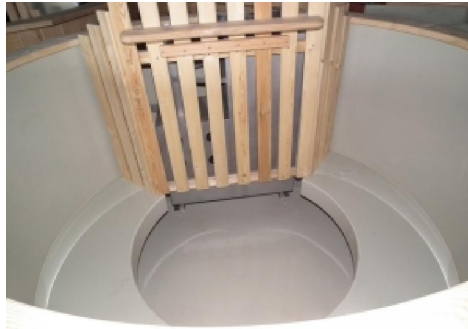

- You can leave the Tub empty or dry, which is ideal during holidays or periods of heavy frost;
- There is no danger of leaks resulting from warped wood;
- Cleaning the Tub on the inside is simple and fast, so there is no need for scrubbing;

The inside is available in 5-8 mm thick Polypropylene in **Cream, Black or Blue**.

The wood finish is available in **Spruce, Larch, Ash or Oak**. Equipped with a 2 mm thick plate stainless steel woodstove as standard. Virtually any required dimensions are possible from 100 cm up to 220 cm in diameter.

You can also choose from the following options:

- 1) Synthetic seats all around. This offers even more cleaning convenience whilst also stimulating a longer lifespan.

Additional cost of 150,-- Euro incl.

- 2) All models can be equipped with an Aluminium stove (3.5mm) for the same price. Aluminium conducts heat faster than stainless steel.
- 3) All models can be equipped with a synthetic lid with wooden handles instead of the standard wooden cover for the same price. A wooden cover can start to warp, which won't happen with a synthetic lid.

Tailor made options:

We can supply our Hot Tubs entirely in line with our customers' specifications as a result of our own production facilities. Please do not hesitate to inform us of any specific requirements and we will take these into account when preparing your quotation.

Prices include VAT and delivery (in Euros – based on an internal stove):
